LawSikho

FOR LLB HOLDERS WORKING IN HR

You used to hire the talent for firms. Now become the legal brains that advise them.

> Use your LLB to explore tech law, employment contracts and workplace compliance.

This page is for you if you hold an LLB, work in HR, and spend your days with offer letters, policies and vendor terms that someone else signs off.

> Tech law is the legal work tech companies need: contracts, privacy, compliance and disputes.

1. Evening 1: draft a software development agreement with us, clause by clause.
2. Evening 2: see six ways tech companies make money, and the legal work each one creates.
3. Evening 3: review a startup's terms and learn how lawyers pitch the fix.

Sat 24 and Sun 25 Oct, 6 to 9 PM IST. Mon 26 Oct, 7 to 10 PM IST. Rs 10 incl. GST, refundable. Live only, no recordings.

Join the 3 live evenings for Rs 10

01

You read the contracts. Someone else gets to be the lawyer.

Your desk sees every offer letter, every leave policy and every vendor agreement for the payroll or attendance software. You notice when a clause is vague. Then you forward it to the legal team and wait.

Somewhere along the way, people stopped remembering you have a law degree. You may have stopped mentioning it yourself. It feels wasted in HR, and you have said so more than once.

02

From the person who forwards the contract to the person who drafts it

Tech law covers what technology companies need from a lawyer, from contracts and privacy to compliance and disputes. A large part of it is reading and drafting documents very like the ones already on your desk. The difference is that here, the reading is the job, and you are hired for it.

A move into tech law could take you into drafting for startups, into a firm's technology team, or into the legal side of a tech company. The craft is one you already practise. The payer and the title change.

Join the 3 live evenings for Rs 10

03

What you may have tried to get closer to law

An HR or labour law certificate
It made you better at the HR desk you already sit at. It did not change what people hire you to do.

Asking for an internal move to the legal team
Legal teams look for drafting samples and legal experience. An HR profile, however strong, does not show either.

Planning an LLM first
An LLM takes a year or more and still leaves you without a document you have drafted for a client. The gap it was meant to fill stays open.

04

Your HR years are the asset, not the detour

You did not lose your law degree in HR. You kept using its main skill, close reading, on employment and vendor documents every day. The issue is how you are positioned, not how hard you have worked.

Think about what HR buys. Payroll tools, attendance apps and hiring platforms are SaaS products sold under subscription terms. You have been the customer on the other side of those terms for years, and tech companies need lawyers who know how customers really read them.

What staying in this in-between place costs

Staying put is comfortable, and HR is a good career. But each year the law degree slips further from how people see you, and the switch feels bigger. Finding out what the move involves costs three evenings and Rs 10.

05

What tech law work looks like for an LLB holder in HR

IP clauses are a good starting point. In a software development agreement, the developer assigns the IP in the work to the client and hands over the code. You already know why ownership of work matters from offer letters, and the tech version follows the same logic.

Privacy is the second area. Tech companies hold personal data about users and staff, and every one of them needs a privacy policy that tells the truth about it. You have handled employee records under confidentiality rules, which is the practical side of the same work.

Third, SaaS contracts. On Day 1 the camp explains SaaS, SLAs and white labelling. Those are the terms inside the HR software deals you have seen from the buyer's side, now drafted from the seller's side.

06

Five words every tech contract uses

On Evening 1 you learn the five concepts behind most technology contracts. None of them needs coding.

SLAs
A service level agreement sets the uptime a software provider promises, what counts as downtime, and the credits a customer gets when the promise is missed.

Support metrics
How fast a provider must answer and fix a problem, written as response and resolution times. Lawyers decide what happens when they slip.

APIs
The connection that lets one app talk to another. The contract decides who may use it, for what, and who is liable when it breaks.

Source code and object code
Source code is what programmers write. Object code is what the machine runs. Licences and ownership clauses turn on the difference.

White labelling
Selling another company's product under your own brand. The agreement sets who owns what, the quality promised and who answers to the customer.

07

What happens in the 3 live evenings

Day 1 · Sat 24 Oct · 6 to 9 PM IST
Why tech law now, the 5 concepts every tech lawyer uses (SLAs, APIs, source and object code, white labelling, SaaS), and a software development agreement drafted with you, clause by clause. Then how lawyers reach startups in the US, UK, Canada, Europe and India.

Day 2 · Sun 25 Oct · 6 to 9 PM IST
Six ways tech companies make money and the legal work each one creates, the services e-commerce companies need from lawyers, the 6-month plan, and how to network with US, UK and Canadian lawyers.

Day 3 · Mon 26 Oct · 7 to 10 PM IST
Reviewing a startup's terms and pitching the fix, an e-commerce refund policy, an influencer agreement, and building a freelance profile for privacy work.

The method we teach

1. Skills
Learn a few high-demand tasks first: contracts, website terms and policies. Not the whole field.

2. Track record
Turn each task into a work sample, a short article or a post that shows what you can do.

3. Outreach
Offer useful help to startups and to lawyers abroad, deliver well, and ask for a testimonial.

Join the 3 live evenings for Rs 10

08

What you will have done by Monday night

On Day 1 you draft a software development agreement with the faculty, clause by clause, from appointment and milestones to acceptance testing, IP assignment and handover. Keep your notes. It is the kind of document a founder could ask you about in a first conversation.

The 6-month plan is 2 hours a day, 1 hour learning and 1 hour on outreach and track record. For someone in a 9 to 6 HR job, that is an evening hour and a morning hour. The early skills are policies, contracts, DPDP and GDPR, which sit close to what you already handle. Over 6 months you could build a small portfolio of drafted documents and decide, from evidence, when to move.

09

The plan after the camp, in plain steps

1. About 2 hours a day: one hour learning, one hour on outreach and your track record.
2. Months 1 and 2: start with the easier skills, such as privacy, website policies and contracts, and begin outreach in week 1.
3. Outreach means posting what you learn on LinkedIn, pitching startups one hour a day, and helping lawyers abroad build their brand first.
4. Aim for your first testimonials in month 1, then add skills one by one: SaaS, e-commerce, fintech, IP and takedowns, and more, about 20 over 6 months.

This is the plan taught on Evening 2. How far you get depends on the hours you put in.

10

Lawyers who took this route

Tuba Sanobar
A 2021 law graduate from Nagpur who was litigating. She now works at Infosys as a privacy and data protection analyst.

Raghav Trehan
A GGSIPU graduate and company secretary. He cleared CIPP/E and joined Mastercard's data privacy team.

Individual results. They depend on each learner's own work.

11

Why the demand exists, and what it costs to find out

Market data, not a promise:

1. A record 55,200 startups were recognised in 2025-26, and India had 2.4 lakh recognised startups by 30 Jun 2026. Source: Inc42, 2026.
2. India has 2,117 global capability centres employing about 23.6 lakh people. Source: Nasscom-Zinnov via Business Today, May 2026.
3. Tracxn tracks 1,215 legal tech startups in India. Source: Tracxn, Sep 2026.
4. Harvey, a legal AI company used by 2,400+ organisations by its own count, hires Legal Engineers in Bengaluru who must be qualified Indian advocates. Source: harvey.ai, 2026.

Route	What it costs	What you get
Figuring it out alone	Free, plus months of trial and error	Scattered articles and no feedback on your drafts
A long course before you have tried the work	A large fee, paid upfront	A commitment before you know if the work suits you
This bootcamp	**Rs 10 incl. GST, refundable**	**Three live evenings doing the work with us**

Risk removed. The Rs 10 is refundable. Bring a laptop or phone and a notebook, and keep the three evenings free. Joining details arrive on WhatsApp and email.

Join the 3 live evenings for Rs 10

12

Questions lawyers ask us

Do I have to leave my HR job to do this?
No. The plan is built for 2 hours a day. You can start with one task at a time beside your job and decide later.

Is HR experience really relevant to tech law?
Yes, in a practical way. Policies, vendor terms and personal data are a large part of tech law. You have seen them from the inside, which helps you draft them for a company.

I am not a technology person. Will the tech terms confuse me?
The camp explains them in plain words on Day 1: SLAs, APIs, source code and object code, white labelling and SaaS. The legal work follows the business model, so no coding is needed.

Why would a startup trust an LLB holder from HR?
Clients judge the draft you send. The camp's formula is skills, plus a track record of real documents, plus outreach. Day 3 shows how to review a startup's terms and pitch the fix.

LLB holders in HR: move into tech law with the reading you already do

If you hold an LLB and work in HR, you already read the kind of documents tech lawyers draft. In three live evenings, you draft a software development agreement with the faculty and see how lawyers reach startups. The seat costs Rs 10 incl. GST and is refundable.

Join the 3 live evenings for Rs 10

Please read. Individual results depend on each learner's own work. LawSikho does not promise any job, client, internship or income. Learner stories describe what individuals did. Market figures come from the sources named beside them and can change. The Rs 10 fee is refundable on request. The bootcamp is live only and is not recorded.

FOR LLB HOLDERS IN BANKING

You already know how money moves. Now learn the law that drives fintech.

Use your degree to explore fintech regulations, financial contracts and technology law.

This page is for you if you hold an LLB and work in a bank in operations, credit, sales or a branch, outside the legal team.

Tech law is the legal work tech companies need: contracts, privacy, compliance and disputes.

1. Evening 1: draft a software development agreement with us, clause by clause.
2. Evening 2: see six ways tech companies make money, and the legal work each one creates.
3. Evening 3: review a startup's terms and learn how lawyers pitch the fix.

Sat 24 and Sun 25 Oct, 6 to 9 PM IST. Mon 26 Oct, 7 to 10 PM IST. Rs 10 incl. GST, refundable. Live only, no recordings.

Join the 3 live evenings for Rs 10

Use your LLB to explore fintech regulations, financial contracts, payments, compliance and technology law.
RISK
COMPLIANCE

01

Loan files and KYC every day, and the law degree on the shelf

You process loan files, check KYC, explain account terms to customers and follow circulars that change often. You know the paperwork of money better than most people outside a bank.

Yet when a document needs a legal view, it goes to the legal department. Your LLB does not appear in your job description, and your next promotion has nothing to do with it.

Meanwhile, the bank's own customers are moving to apps for loans and payments. You can see where the work is going. You are not sure where you fit.

02

Fintech law: banking knowledge, used as a lawyer

Fintech is one of the clearest parts of tech law, the legal work behind technology businesses. A lending app is a lending business with software in front, so the law on loans, KYC and data still applies. What changes is that the business runs on apps, partner contracts and APIs.

Moving into tech law could let you work on that side: drafting and checking the contracts and policies of fintech startups, or later joining a fintech's legal team. You would use the banking sense you have built, with your law degree finally doing the work.

Join the 3 live evenings for Rs 10

03

Paths bank staff with an LLB usually try

The bank's internal exams and promotions
They move you up in banking. They do not move you into law, and each grade makes the switch feel more costly.

Applying to the bank's legal department
Legal roles inside banks usually want practising lawyers with years at the bar. Operations experience is not counted as legal experience.

A diploma in banking law
It gives theory you mostly know from the job. You finish with a certificate but no drafted document that a fintech could look at.

04

You know the banking half. Tech law is the missing half.

Most lawyers who try fintech know law but not how a loan actually moves through a system. You have the opposite gap. That is a positioning problem, and it is easier to fix than it looks.

The camp's script uses the example of a startup with a lending algorithm that wants to work with NBFCs and banks. Can it do this, where, and at what cost? Someone who has sat inside a bank already knows half the questions a partner bank will ask.

What waiting costs you

Your banking experience keeps its value, so there is no reason to rush. But the longer the LLB stays unused, the harder it is to explain on a profile. Three evenings will tell you whether this route suits you.

05

What fintech law work looks like for an LLB holder in banking

Structuring is where fintech work often starts. A founder wants to lend, collect payments or offer a product with a partner bank. The lawyer maps which entity does what and which approvals apply, and you already know how the bank side thinks.

Contracts come next. White labelling, one of the Day 1 concepts, is how one company's product is sold under another's brand, as with many co-branded financial products. APIs are how a fintech app talks to a bank. Each shows up as clauses you would draft or review.

Then compliance and privacy. Payment and lending apps hold sensitive financial and personal data. Their privacy policies, sector filings and sandbox applications need someone who reads rules closely, which you have done with circulars for years.

06

Five words every tech contract uses

On Evening 1 you learn the five concepts behind most technology contracts. None of them needs coding.

SLAs
A service level agreement sets the uptime a software provider promises, what counts as downtime, and the credits a customer gets when the promise is missed.

Support metrics
How fast a provider must answer and fix a problem, written as response and resolution times. Lawyers decide what happens when they slip.

APIs
The connection that lets one app talk to another. The contract decides who may use it, for what, and who is liable when it breaks.

Source code and object code
Source code is what programmers write. Object code is what the machine runs. Licences and ownership clauses turn on the difference.

White labelling
Selling another company's product under your own brand. The agreement sets who owns what, the quality promised and who answers to the customer.

07

What happens in the 3 live evenings

Day 1 · Sat 24 Oct · 6 to 9 PM IST
Why tech law now, the 5 concepts every tech lawyer uses (SLAs, APIs, source and object code, white labelling, SaaS), and a software development agreement drafted with you, clause by clause. Then how lawyers reach startups in the US, UK, Canada, Europe and India.

Day 2 · Sun 25 Oct · 6 to 9 PM IST
Six ways tech companies make money and the legal work each one creates, the services e-commerce companies need from lawyers, the 6-month plan, and how to network with US, UK and Canadian lawyers.

Day 3 · Mon 26 Oct · 7 to 10 PM IST
Reviewing a startup's terms and pitching the fix, an e-commerce refund policy, an influencer agreement, and building a freelance profile for privacy work.

The method we teach

1. Skills
Learn a few high-demand tasks first: contracts, website terms and policies. Not the whole field.

2. Track record

3. Outreach
Offer useful help to startups and to lawyers abroad, deliver well, and ask for a testimonial.

Join the 3 live evenings for Rs 10

08

What you will have done by Monday night

After Day 1 you will have drafted a software development agreement with the faculty, the kind a fintech signs when it gets its app built. You will also understand APIs, SLAs and white labelling well enough to spot them in a fintech contract.

The 6-month plan runs at 2 hours a day, split between learning and outreach. Fintech structuring, e-commerce and fintech compliance, and DPDP compliance are all in its skill list. Bank hours are long, so an hour on each side of work is a realistic pace. By month 6 you could have a handful of fintech-style drafts and a clear idea of whether the field fits you.

09

The plan after the camp, in plain steps

1. About 2 hours a day: one hour learning, one hour on outreach and your track record.
2. Months 1 and 2: start with the easier skills, such as privacy, website policies and contracts, and begin outreach in week 1.
3. Outreach means posting what you learn on LinkedIn, pitching startups one hour a day, and helping lawyers abroad build their brand first.

12

Questions lawyers ask us

Is fintech law taught on the camp itself?
The camp gives the base: tech concepts, a software development agreement, how tech companies make money and how lawyers reach startups. Fintech structuring and compliance sit in the 6-month skill plan shown on Day 2.

Do I need to resign from the bank?
No. The plan is 2 hours a day. The camp's team gives moonlighting guidance, and it is wise to check your bank's rules on outside work before taking paid tasks.

I never practised. Does that matter for this work?
Much of fintech law is drafting, review and compliance, not court work. Clients judge the documents you produce, and the camp shows how to build a track record of them.

What do I need for the camp?
A laptop or phone, a stable connection and three evenings: Sat 24 and Sun 25 Oct, 6 to 9 PM IST, and Mon 26 Oct, 7 to 10 PM IST. Nothing is recorded, so be there live.

LLB holders working in banks: turn your LLB into a fintech law career

If you hold an LLB and work in a bank outside the legal team, you already know the banking half of fintech law. Three live evenings show you the tech law half, starting with a software contract drafted with you on Day 1. Joining costs Rs 10 incl. GST, and the fee is refundable.

Join the 3 live evenings for Rs 10

Please read. Individual results depend on each learner's own work. LawSikho does not promise any job, client, internship or income. Learner stories describe what individuals did. FOR LLB HOLDERS IN CONTENT

You used to write the content. Now learn to draft the contracts as well.

> **Use your LLB to build practical skills in software agreements, privacy policies and tech law documents.**

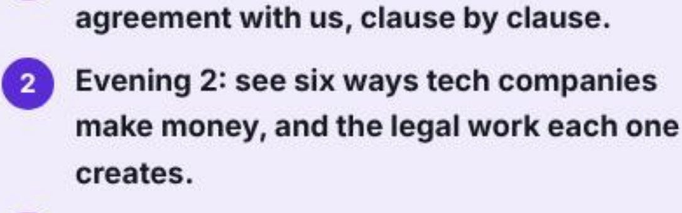
This page is for you if you hold an LLB and write for a living: blogs, web copy, scripts, newsletters or legal articles under someone else's byline.

> Tech law is the legal work tech companies need: contracts, privacy, compliance and disputes.

1. **Evening 1: draft a software development agreement with us, clause by clause.**
2. **Evening 2: see six ways tech companies make money, and the legal work each one creates.**
3. **Evening 3: review a startup's terms and learn how lawyers pitch the fix.**

Sat 24 and Sun 25 Oct, 6 to 9 PM IST. Mon 26 Oct, 7 to 10 PM IST. Rs 10 incl. GST, refundable. Live only, no recordings.

Join the 3 live evenings for Rs 10



01

You write all day, and none of it uses your law degree

You are good with words. Clients send briefs, you turn them around fast, and the work goes out under their name. Payment is by the word or the piece, and the rate rarely moves.

Your LLB sits behind all of it. You may even write about law, explaining judgments for a firm's blog. But you are hired as a writer, so you are paid and treated as one.

02

Writing that carries legal weight

Terms of use, privacy policies, refund policies and influencer agreements are all writing. They must be clear enough for a customer and precise enough to hold up in a dispute. That combination is rare, and tech companies need it on every website and app they launch.

Moving into tech law, the legal side of technology businesses, would make you the person who drafts those documents as a lawyer. Your writing stays your strength, but it is paid for as legal work, under your own name.

Join the 3 live evenings for Rs 10

03

Ways writers with an LLB try to get closer to law

Legal content writing for law firm blogs
It is closer to law in topic, but you are still bought as content. The firm keeps the client, and you keep the word count.

Ghostwriting articles for lawyers
The articles build someone else's name. You gain knowledge but no track record that a client could check.

Telling yourself you will go back to litigation one day
Court practice means starting from zero as a junior, in person, during the day. The plan stays parked because it does not fit the life you have built.

04

You have the hard half already

Many lawyers find plain writing difficult. Their policies read like a judgment, and founders do not understand them. You can write for a reader, so the positioning you are missing is simple: not a writer with an LLB, but a lawyer who writes clearly.

The camp's own route to clients rewards this. On Day 1 and Day 2 it shows how lawyers network with US, UK and Canadian lawyers by helping first, with blogs, posts and podcasts. For you, that first step is something you already do well.

The quiet cost of staying a writer

Writing is honest work, and you are not doing anything wrong by staying. The cost is only that your best skill keeps being priced as content, and the law degree keeps waiting. Three evenings is a small price to see the other option clearly.

05

What tech law work looks like for an LLB holder who writes content

Website policies are the obvious start. Every startup site needs terms of use, a privacy policy and a cookie policy. On Day 3 the camp reviews a startup's terms against six checks, such as liability caps, termination and IP ownership.

E-commerce gives you more. A refund policy in the camp's 4 parts covers when a buyer can cancel, when they can return, how the return works, and how and when the money goes back. It is legal drafting that customers actually read.

Creators are a natural fit too. Day 3 covers legal work for influencers and a 5-clause influencer agreement: engagement and fee, deliverables, IP licence, content ownership and brand guidelines. You know how content deals work from the creator's side, including where fees and usage rights usually cause arguments.

06

Five words every tech contract uses

On Evening 1 you learn the five concepts behind most technology contracts. None of them needs coding.

SLAs
A service level agreement sets the uptime a software provider promises, what counts as downtime, and the credits a customer gets when the promise is missed.

Support metrics
How fast a provider must answer and fix a problem, written as response and resolution times. Lawyers decide what happens when they slip.

APIs
The connection that lets one app talk to another. The contract decides who may use it, for what, and who is liable when it breaks.

Source code and object code
Source code is what programmers write. Object code is what the machine runs. Licences and ownership clauses turn on the difference.

White labelling
Selling another company's product under your own brand. The agreement sets who owns what, the quality promised and who answers to the customer.

07

What happens in the 3 live evenings

Day 1 · Sat 24 Oct · 6 to 9 PM IST
Why tech law now, the 5 concepts every tech lawyer uses (SLAs, APIs, source and object code, white labelling, SaaS), and a software development agreement drafted with you, clause by clause. Then how lawyers reach startups in the US, UK, Canada, Europe and India.

Day 2 · Sun 25 Oct · 6 to 9 PM IST
Six ways tech companies make money and the legal work each one creates, the services e-commerce companies need from lawyers, the 6-month plan, and how to network with US, UK and Canadian lawyers.

Day 3 · Mon 26 Oct · 7 to 10 PM IST
Reviewing a startup's terms and pitching the fix, an e-commerce refund policy, an influencer agreement, and building a freelance profile for privacy work.

The method we teach

1. Skills
Learn a few high-demand tasks first: contracts, website terms and policies. Not the whole field.

Turn each task into a work sample, a short article or a post that shows what you can do.

3. Outreach
Offer useful help to startups and to lawyers abroad, deliver well, and ask for a testimonial.

Join the 3 live evenings for Rs 10

08

What you will have done by Monday night

By Day 3 you will have drafted an e-commerce refund policy and an influencer agreement with the faculty. Both are short, plain documents. Clean versions of them could become the first legal samples in a portfolio that has so far held only articles.

The 6-month plan asks for 2 hours a day, half on learning and half on outreach. Website policies and contracts come first, in the opening 2 months, because they are the easiest skills to start with and the most often needed. Outreach can start in week 1 with a LinkedIn post on what you are learning, which suits a writer. By month 6 you could have a portfolio of drafted policies and agreements under your own name.

09

The plan after the camp, in plain steps

1. About 2 hours a day: one hour learning, one hour on outreach and your track record.
2. Months 1 and 2: start with the easier skills, such as privacy, website policies and contracts, and begin outreach in week 1.
3. Outreach means posting what you learn on LinkedIn, pitching startups one hour a day, and helping lawyers abroad build their brand first.
4. Aim for your first testimonials in month 1, then add skills one by one: SaaS, e-commerce, fintech, IP and takedowns, and more, about 20 over 6 months.

This is the plan taught on Evening 2. How far you get depends on the hours you put in.

10

Lawyers who took this route

12

Questions lawyers ask us

Is this just content writing with a new label?
No. Content explains an idea. A policy or agreement creates rights and duties, and the drafting decides who carries the risk. The camp teaches that difference through live drafting.

I have never drafted a contract. Is my writing enough?
Writing is a strong base, not the whole job. The camp walks through a software development agreement clause by clause on Day 1, so you learn contract structure from the start.

Can my writing samples help me get clients?
They show you can write. Clients for legal work want legal samples, which is why the camp's formula is skills, a track record of drafted documents, and outreach.

Do I need any technical knowledge?
No coding is needed. Day 1 explains SLAs, APIs, source and object code, white labelling and SaaS in plain words.

LLB holders writing content: write contracts and policies as a tech lawyer instead

If you hold an LLB and write for a living, you already have the half of tech law many lawyers struggle with. In three live evenings you draft a refund policy and an influencer agreement with the faculty. It is Rs 10 incl. GST, refundable, and live only.

Join the 3 live evenings for Rs 10

Please read. Individual results depend on each learner's own work. LawSikho does not promise any job, client, internship or income. Learner stories describe what individuals did. FOR LLB HOLDERS IN SALES & OPERATIONS

You know how business works. Now become the legal brain behind the deal.

> Use your degree to explore commercial contracts, software agreements and compliance.

This page is for you if you hold an LLB and work in sales, business development or operations, and the law degree has not been part of your work.

> Tech law is the legal work tech companies need: contracts, privacy, compliance and disputes.

1. Evening 1: draft a software development agreement with us, clause by clause.
2. Evening 2: see six ways tech companies make money, and the legal work each one creates.
3. Evening 3: review a startup's terms and learn how lawyers pitch the fix.

Sat 24 and Sun 25 Oct, 6 to 9 PM IST. Mon 26 Oct, 7 to 10 PM IST. Rs 10 incl. GST, refundable. Live only, no recordings.

Join the 3 live evenings for Rs 10

DEALS
CONTRACTS
COMPLIANCE

01

Targets every month, and a law degree nobody asks about

Your month runs on numbers: calls, demos, closures, dispatch times or escalations. You understand how a business brings in money and keeps customers. Most weeks, you deliver.

The LLB was meant to lead somewhere else. Now it comes up only when a colleague asks you to look at a contract informally. You do, you spot the problem, and it changes nothing about your role.

02

A career where knowing how a business sells is a legal skill

Tech law is legal work for technology companies, and it follows the business model. The script says it plainly: the work depends on how a tech business works and makes money, not on code. That gives a person who understands selling a real head start.

Moving into tech law could mean drafting and reviewing for startups, or joining a tech company's legal team later. You would stop chasing targets set by others and start doing work that uses both your degree and your business sense.

Join the 3 live evenings for Rs 10

03

Moves people in sales and operations usually consider

An MBA to rise faster in sales
It deepens the career you are already in. It does not bring the law degree back into use.

Starting at the district court
Litigation starts slowly and pays juniors little in the first years. It also sets aside the business sense you have spent years building.

Watching free law videos in the evenings
You learn things, but you produce nothing. Without a drafted document, nobody can see you as a lawyer.

04

Your sales years count for two of the three parts

The camp's roadmap is skills, plus track record, plus outreach. Lawyers often struggle most with outreach: writing to strangers, following up and handling silence. You already do that every week, so the gap you need to close is skills, and skills can be learned.

There is a second advantage. Day 2 teaches 6 ways tech companies make money: advertising, subscription, commission and affiliate, marketplace and third-party seller, hardware and IoT, and tech consulting. You have probably sold under at least one of those models, and you know where its disputes come from.

What another year of targets costs

Sales and operations can be a fine career, and you can stay. The cost of staying unclear is that the law degree slowly stops being an option you take seriously. Three evenings for Rs 10 is a cheap way to test the other path.

05

What tech law work looks like for an LLB holder from sales or operations

Start with reviewing terms. On Day 3 the camp checks a startup's terms for six things. They are no liability for free services, liability capped at the fee for paid ones, and clear termination. The other three are community standards, a link to a compliant privacy policy, and IP ownership. Then the faculty shows how to pitch the fix.

Pitching the fix is where you shine. The Day 3 goal is 5 cold emails and 3 follow-ups a day. For many lawyers that is the hardest part. For someone from sales, it is a familiar routine with a better product.

Operations knowledge feeds service contracts. SLAs set uptime, downtime and credits, and support metrics set response times. On the ops side you have enforced such promises. As a tech lawyer you would write them.

06

Five words every tech contract uses

On Evening 1 you learn the five concepts behind most technology contracts. None of them needs coding.

SLAs
A service level agreement sets the uptime a software provider promises, what counts as downtime, and the credits a customer gets when the promise is missed.

Support metrics
How fast a provider must answer and fix a problem, written as response and resolution times. Lawyers decide what happens when they slip.

APIs
The connection that lets one app talk to another. The contract decides who may use it, for what, and who is liable when it breaks.

Source code and object code
Source code is what programmers write. Object code is what the machine runs. Licences and ownership clauses turn on the difference.

White labelling
Selling another company's product under your own brand. The agreement sets who owns what, the quality promised and who answers to the customer.

07

What happens in the 3 live evenings

Day 1 · Sat 24 Oct · 6 to 9 PM IST
Why tech law now, the 5 concepts every tech lawyer uses (SLAs, APIs, source and object code, white labelling, SaaS), and a software development agreement drafted with you, clause by clause. Then how lawyers reach startups in the US, UK, Canada, Europe and India.

Day 2 · Sun 25 Oct · 6 to 9 PM IST
Six ways tech companies make money and the legal work each one creates, the services e-commerce companies need from lawyers, the 6-month plan, and how to network with US, UK and Canadian lawyers.

Day 3 · Mon 26 Oct · 7 to 10 PM IST
Reviewing a startup's terms and pitching the fix, an e-commerce refund policy, an influencer agreement, and building a freelance profile for privacy work.

The method we teach

1. Skills
Learn a few high-demand tasks first: contracts, website terms and policies. Not the whole field.

2. Track record
Turn each task into a work sample, a short article or a post that shows what you can do.

3. Outreach
Offer useful help to startups and to lawyers abroad, deliver well, and ask for a testimonial.

Join the 3 live evenings for Rs 10

08

What you will have done by Monday night

On Day 3 you review a real startup's terms with the faculty against the six checks. You then see how a lawyer writes the short note that offers the fix to the founder. You come away with a method you could repeat on any startup website that same evening.

The 6-month plan sets 2 hours a day: 1 hour learning, 1 hour outreach. Day 2 also names places to find startups, such as Product Hunt and Shopify store lists. Someone with a sales habit could keep that outreach hour steady from week 1. By month 6 you could know, from real replies, whether this is the career you want.

09

The plan after the camp, in plain steps

1. About 2 hours a day: one hour learning, one hour on outreach and your track record.
2. Months 1 and 2: start with the easier skills, such as privacy, website policies and contracts, and begin outreach in week 1.
3. Outreach means posting what you learn on LinkedIn, pitching startups one hour a day, and helping lawyers abroad build their brand first.
4. Aim for your first testimonials in month 1, then add skills one by one: SaaS, e-commerce, fintech, IP and takedowns, and more, about 20 over 6 months.

This is the plan taught on Evening 2. How far you get depends on the hours you put in.

10

Lawyers who took this route

Mayank Barman
Studied at Calcutta University and began learning tech law in his second year. He worked in the TMT team at Cyril Amarchand Mangaldas and is now an associate on Khaitan & Co's data privacy team.

Tuba Sanobar
A 2021 law graduate from Nagpur who was litigating. She now works at Infosys as a privacy and data protection analyst.

Individual results. They depend on each learner's own work.

11

Why the demand exists, and what it costs to find out

Market data, not a promise:

1. A record 55,200 startups were recognised in 2025-26, and India had 2.4 lakh recognised startups by 30 Jun 2026. Source: Inc42, 2026.
2. India has 2,117 global capability centres employing about 23.6 lakh people. Source: Nasscom-Zinnov via Business Today, May 2026.
3. Tracxn tracks 1,215 legal tech startups in India. Source: Tracxn, Sep 2026.
4. Harvey, a legal AI company used by 2,400+ organisations by its own count, hires Legal Engineers in Bengaluru who must be qualified Indian advocates. Source: harvey.ai, 2026.

Route	What it costs	What you get
Figuring it out alone	Free, plus months of trial and error	Scattered articles and no feedback on your drafts
A long course before you have tried the work	A large fee, paid upfront	A commitment before you know if the work suits you
This bootcamp	**Rs 10 incl. GST, refundable**	**Three live evenings doing the work with us**

Risk removed. The Rs 10 is refundable. Bring a laptop or phone and a notebook, and keep the three evenings free. Joining details arrive on WhatsApp and email.

12

Questions lawyers ask us

I moved to sales partly because I disliked court. Is tech law different?
Yes. Tech law is mostly contracts, policies and compliance, done in writing. The camp is built around drafting and review, not court appearances.

Will my sales background look odd to clients?
Clients judge the draft and how clearly you explain the fix. Knowing how their business sells helps you do both.

How much time does it need beside a target-driven job?
The plan needs about 2 hours a day, which fits before or after a working day. The camp itself is three evenings: Sat 24 and Sun 25 Oct, 6 to 9 PM IST, and Mon 26 Oct, 7 to 10 PM IST.

I have not read law since college. Is that a problem?
No. The camp teaches each document from its first clause. The legal work follows the business model, which is the part you already know.

LLB holders in sales or operations: your LLB can still move you into tech law

If you hold an LLB and work in sales or operations, you already understand how tech businesses make money and how to reach people. Three live evenings add the legal half, from a software contract on Day 1 to a startup's terms on Day 3. Your seat is Rs 10 incl. GST, refundable.

Join the 3 live evenings for Rs 10

Please read. Individual results depend on each learner's own work. LawSikho does not promise any job, client, internship or income. Learner stories describe what individuals did. Market figures come from the sources named beside them and can change. The Rs 10 fee is refundable on request. The bootcamp is live only and is not recorded.

FOR LAWYERS WHO PAUSED PRACTICE FOR FAMILY

You took a break from practice. Not from being a lawyer. Let's restart.

> **Use your degree to rebuild practical legal skills in contracts, privacy and technology law.**

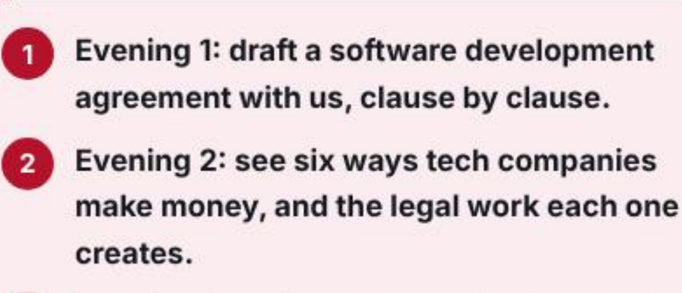
This page is for you if you paused your legal practice to care for a parent, a spouse or a child, and you wonder whether coming back is still possible.

> Tech law is the legal work tech companies need: contracts, privacy, compliance and disputes.

1. **Evening 1: draft a software development agreement with us, clause by clause.**
2. **Evening 2: see six ways tech companies make money, and the legal work each one creates.**
3. **Evening 3: review a startup's terms and learn how lawyers pitch the fix.**

Sat 24 and Sun 25 Oct, 6 to 9 PM IST. Mon 26 Oct, 7 to 10 PM IST. Rs 10 incl. GST, refundable. Live only, no recordings.

Join the 3 live evenings for Rs 10



01

Your days belong to someone who needs you

Caring for family does not keep office hours. There are hospital visits, medicines, therapy sessions and nights that end late. You stopped practising because court dates and care could not both win.

Now there is a little more room, but it comes in pieces: an hour here, a quiet afternoon there. You keep saying it is too late to come back to law. Part of you is not sure that is true.

You still read the odd judgment, and friends still call you for advice. But advice to friends is not a career, and you miss the work of being a lawyer.

02

Law that fits into the hours you actually have

Tech law means the contracts, privacy rules, compliance and disputes of technology companies. The work comes as documents, not hearings. A contract can be read at night, and a policy can be drafted across two afternoons.

Coming back as a tech lawyer could let you practise law again on your own hours, one task at a time. As care duties ease, you could take on more, or move towards a fuller role later. None of it asks you to leave the house.

Join the 3 live evenings for Rs 10

03

What you may have tried to stay in law

Working part-time with a senior
A chamber needs you in court on the senior's schedule. One emergency at home and you become the junior who did not turn up.

Taking occasional briefs from your old network
Briefs come with hearing dates you cannot control. Saying no twice is often enough for the referrals to stop.

Waiting until care duties end
Care rarely has an end date you can plan around. Waiting turns months into years without a decision.

04

The work needs your judgment, not your presence

Nothing is wrong with your commitment. You have shown more of it than most people ever will. The problem was that court work is tied to a place and a time, and your life is not.

Tech law moves your skill into a format that fits. A startup hands out one task at a time: review these terms, draft this agreement. You read, you draft, you send, and your legal training is the same asset it always was.

What staying away costs

Stepping back was right, and nobody should rush you. The only cost of staying unclear is that the question keeps returning without an answer. Three evenings will at least tell you whether this route can work for you.

05

What tech law work looks like for a lawyer who paused practice to care for family

Terms review is a task that fits a broken day. On Day 3 the camp checks a startup's terms for six things, including liability caps, termination and IP ownership. You can do one check, pause, and come back to the next.

Short agreements fit too. A 5-clause influencer agreement covers the fee, deliverables, IP licence, content ownership and brand guidelines. It is the kind of document you could draft in a single quiet evening.

Over time, longer contracts become possible. A software development agreement sets out milestones, acceptance testing and the handover of code. You have drafted agreements like it before, and the camp gives you the tech vocabulary to draft this one.

06

Five words every tech contract uses

On Evening 1 you learn the five concepts behind most technology contracts. None of them needs coding.

SLAs
A service level agreement sets the uptime a software provider promises, what counts as downtime, and the credits a customer gets when the promise is missed.

Support metrics
How fast a provider must answer and fix a problem, written as response and resolution times. Lawyers decide what happens when they slip.

APIs
The connection that lets one app talk to another. The contract decides who may use it, for what, and who is liable when it breaks.

Source code and object code
Source code is what programmers write. Object code is what the machine runs. Licences and ownership clauses turn on the difference.

White labelling
Selling another company's product under your own brand. The agreement sets who owns what, the quality promised and who answers to the customer.

07

What happens in the 3 live evenings

Day 1 · Sat 24 Oct · 6 to 9 PM IST

08

What you will have done by Monday night

By the end of Day 3 you will have reviewed a real startup's terms with the faculty against six checks. You will also see how a lawyer writes to the founder to offer the fix. It is a complete task, done from home, of the kind tech clients hand out.

The 6-month plan asks for 2 hours a day, split between learning and outreach. On some days care will take those hours, and the plan can stretch. The early skills are policies and contracts, which suit short, broken sessions. By month 6, a steady learner could have a set of finished tasks and a clearer view of how much work to take on. Every finished task can also become a work sample.

09

The plan after the camp, in plain steps

1. About 2 hours a day: one hour learning, one hour on outreach and your track record.
2. Months 1 and 2: start with the easier skills, such as privacy, website policies and contracts, and begin outreach in week 1.
3. Outreach means posting what you learn on LinkedIn, pitching startups one hour a day, and helping lawyers abroad build their brand first.

12

Questions lawyers ask us

Is it too late for me to come back to law?
Not in this field. The rules are new, so a lawyer coming back stands close to the same starting line as everyone else.

I cannot promise fixed hours every day. Will that work?
The plan suggests 2 hours a day, but the work itself is task-based. You can take on one task at a time and say no when home needs you.

What if a care emergency means I miss one evening?
There are no recordings, because the camp is live only. You can still attend the other evenings, and the Rs 10 is refundable.

Do I need to understand software to do this?
No. The work follows how a tech business makes money, and no coding is needed at any stage.

Lawyers who paused practice to care for family: come back to law as a tech lawyer

If you paused practice to care for family, tech law lets you come back to legal work on your own hours, one task at a time. In three live evenings you review a startup's terms and draft real clauses with the faculty. The cost is Rs 10 incl. GST, and you can get it refunded.

Join the 3 live evenings for Rs 10

Please read. Individual results depend on each learner's own work. LawSikho does not promise any job, client, internship or income. Learner stories describe what individuals did. Market figures come from the sources named beside them and can change. The Rs 10 fee is refundable on request. The bootcamp is live only and is not recorded.

FOR LAWYERS WHO MOVED CITIES AFTER MARRIAGE

New city. New chapter. Your LLB still comes with you. Let's make use of it.

> Explore practical tech law skills that can open up new directions for your legal career.

This page is for you if you are a lawyer who moved to a new city after marriage and left a practice, a court and a network behind.

> Tech law is the legal work tech companies need: contracts, privacy, compliance and disputes.

1. Evening 1: draft a software development agreement with us, clause by clause.
2. Evening 2: see six ways tech companies make money, and the legal work each one creates.
3. Evening 3: review a startup's terms and learn how lawyers pitch the fix.

Sat 24 and Sun 25 Oct, 6 to 9 PM IST. Mon 26 Oct, 7 to 10 PM IST. Rs 10 incl. GST, refundable. Live only, no recordings.

Join the 3 live evenings for Rs 10

01

New city, no court, no contacts

You had built something in your old city: a court you knew, clerks who knew you, clients who called. Marriage brought you here, and that practice stayed behind.

Here, nobody knows your name. The local bar has its own seniors and its own circles. Sometimes even the court language is different. Starting again feels like being a first-year junior with years of experience.

You still read every agreement your family signs, and you still spot the gaps. What you do not have is a place to use that skill here.

02

A career that does not depend on your court address

Tech law is the work lawyers do for technology businesses on contracts, privacy, compliance and disputes. A startup client needs the document, not your court address. The work can be done from any city with a laptop and a connection.

Starting a tech law career could let you build a practice that moves with you. Clients could come from India, the US, the UK, Canada or Europe. If you move again, the career comes along.

Join the 3 live evenings for Rs 10

03

Ways lawyers who relocate usually try to restart

Joining a senior in the new city's courts
You start as a junior again, in a bar where seniority is local. Years of experience elsewhere count for little in a new chamber.

Applying to firms in your new city
Many firm openings travel through local networks you have not built yet. Your old city's references do not carry far.

Travelling back to handle old matters
It keeps a few clients for a while. The trips are tiring and costly, and the practice still thins out.

04

You did not lose your skill. You lost your location.

What you lost in the move is a network tied to one court. Your skill came with you. The question is where to point it, and that is a positioning choice, not a test of effort.

Court years train you to read a document for what is missing, then write the notice or reply that fixes it. Reviewing a startup's terms is the same reading. One of the Day 1 message templates starts by telling a founder you reviewed their terms and noticed 3 missing clauses.

What waiting to settle in costs

Settling into a new city takes time, and that is normal. But each month without legal work makes the next step feel larger. Three evenings from your new home, for Rs 10, is a small first move.

05

What tech law work looks like for a lawyer who moved city after marriage

Finding clients starts online. On Day 1 the camp shows how lawyers reach startups in the US, UK, Canada, Europe and India, with demos on Y Combinator and Shark Tank. The target is small startups before Series A, with fewer than 20 people.

The first piece of work is often a review. You read a founder's terms, list what is missing, and offer to fix it. That is the reading you did on notices and pleadings, now done for a business. It is also a task you can finish in one evening.

Networking replaces your old bar circle. Day 2 and Day 3 show how to connect with US, UK and Canadian lawyers through their directories, by helping first. Your new network can be built from your new home.

06

Five words every tech contract uses

On Evening 1 you learn the five concepts behind most technology contracts. None of them needs coding.

SLAs
A service level agreement sets the uptime a software provider promises, what counts as downtime, and the credits a customer gets when the promise is missed.

Support metrics
How fast a provider must answer and fix a problem, written as response and resolution times. Lawyers decide what happens when they slip.

APIs
The connection that lets one app talk to another. The contract decides who may use it, for what, and who is liable when it breaks.

Source code and object code
Source code is what programmers write. Object code is what the machine runs. Licences and ownership clauses turn on the difference.

White labelling
Selling another company's product under your own brand. The agreement sets who owns what, the quality promised and who answers to the customer.

07

What happens in the 3 live evenings

Day 1 · Sat 24 Oct · 6 to 9 PM IST
Why tech law now, the 5 concepts every tech lawyer uses (SLAs, APIs, source and object code, white labelling, SaaS), and a software development agreement drafted with you, clause by clause. Then how lawyers reach startups in the US, UK, Canada, Europe and India.

Day 2 · Sun 25 Oct · 6 to 9 PM IST
Six ways tech companies make money and the legal work each one creates, the services e-commerce companies need from lawyers, the 6-month plan, and how to network with US, UK and Canadian lawyers.

Day 3 · Mon 26 Oct · 7 to 10 PM IST
Reviewing a startup's terms and pitching the fix, an e-commerce refund policy, an influencer agreement, and building a freelance profile for privacy work.

The method we teach

1. Skills
Learn a few high-demand tasks first: contracts, website terms and policies. Not the whole field.

2. Track record
Turn each task into a work sample, a short article or a post that shows what you can do.

3. Outreach
Offer useful help to startups and to lawyers abroad, deliver well, and ask for a testimonial.

Join the 3 live evenings for Rs 10

08

What you will have done by Monday night

On Day 1 you draft a software development agreement with the faculty, clause by clause, and learn the two outreach message templates. That gives you a document you understand and a way to start conversations, both from wherever you now live.

The 6-month plan asks for 2 hours a day: 1 for learning and 1 for outreach. Outreach starts in week 1, with LinkedIn posts and an hour a day pitching startups. In a city where you know nobody, that hour builds the network your old court used to give you. By month 6 you could have a set of contacts and drafts that belong to no single city.

09

The plan after the camp, in plain steps

1. About 2 hours a day: one hour learning, one hour on outreach and your track record.
2. Months 1 and 2: start with the easier skills, such as privacy, website policies and contracts, and begin outreach in week 1.
3. Outreach means posting what you learn on LinkedIn, pitching startups one hour a day, and helping lawyers abroad build their brand first.
4. Aim for your first testimonials in month 1, then add skills one by one: SaaS, e-commerce, fintech, IP and takedowns, and more, about 20 over 6 months.

This is the plan taught on Evening 2. How far you get depends on the hours you put in.

10

Questions lawyers ask us

I do not know anyone in this city. Can I still find work?
The camp's outreach is online, to startups and lawyers in several countries. It does not depend on local contacts.

Do I have to give up the idea of practising in court here?
No. Tech law can run beside a new court practice or replace it. You can decide that later, once you have seen the work.

As an enrolled advocate, can I approach startups at all?
The rules restrict advertising and soliciting. The approach the camp teaches is to find a genuine issue in a public document and share a useful observation, not to ask for a brief. For anything specific, ask your State Bar Council.

My old practice was litigation. Is that enough to start?
Litigation trains close reading and drafting, which are the base of contract review. The camp adds the tech side on Day 1, from SLAs and APIs to SaaS.

Lawyers who moved city after marriage: start a tech law career wherever you live now

If you moved city after marriage and left a practice behind, tech law lets you build again without a local court or network. In three live evenings you draft a software contract and learn how lawyers reach startups abroad. All three evenings cost Rs 10 incl. GST, refundable.

FOR INDIAN LAWYERS LIVING ABROAD WITH FAMILY

You moved countries. Don't leave your legal ambitions behind.

> Use your Indian law degree to explore tech law skills and the opportunities open to you.

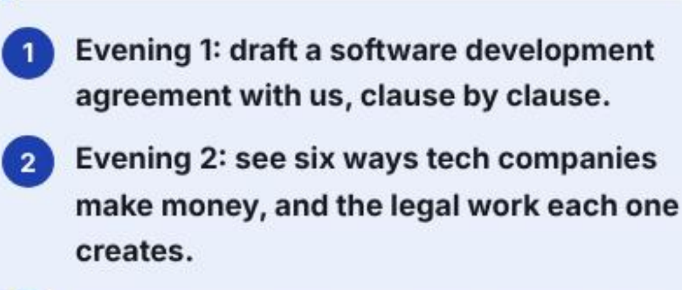
This page is for you if you are an Indian lawyer living abroad with family, often on a dependent visa, and far from your own bar.

> Tech law is the legal work tech companies need: contracts, privacy, compliance and disputes.

1. Evening 1: draft a software development agreement with us, clause by clause.
2. Evening 2: see six ways tech companies make money, and the legal work each one creates.
3. Evening 3: review a startup's terms and learn how lawyers pitch the fix.

Sat 24 and Sun 25 Oct, 6 to 9 PM IST. Mon 26 Oct, 7 to 10 PM IST. Rs 10 incl. GST, refundable. Live only, no recordings.

Join the 3 live evenings for Rs 10



01

A law degree from home, in a country that does not recognise it

You moved abroad for your spouse's job or your family's future. The new country has its own bar, its own exams and its own rules. Your Indian enrolment does not let you practise there.

So the days fill with other things. Some lawyers take jobs far from law. Others wait while visa papers decide what they may do. Either way, the career you trained for is on hold. Friends back home assume you are settled, while you open job sites at night and close them again.

02

Legal drafting travels, even when a licence does not

Tech law is the body of legal work behind technology companies: contracts, privacy, compliance and disputes. A contract, a set of terms or a privacy policy is drafted the same way in Delhi and Dallas. The craft does not stop at a border.

Building a tech law career could let you do legal work again from wherever you live. That could mean drafting support for lawyers in your new country, work for startups looking at India, or Indian law tasks for founders anywhere.

Join the 3 live evenings for Rs 10

03

Routes Indian lawyers abroad usually weigh

Requalifying in the new country
It can take years of exams and fees before you work as a lawyer again. It may be right later, but it leaves the years in between empty.

Taking a job outside law
It brings routine and some independence. It also takes your legal skills further away each year.

Remote work for your old firm in India
Few firms keep a remote role open for long. When the matters dry up, there is no plan behind it.

04

Being abroad is part of your position, not a gap in it

You are not short of ability. You are positioned as a lawyer who cannot practise here, when you could be positioned as a lawyer who drafts for the tech economy anywhere.

Living abroad also helps. You understand how businesses in your new country talk, and you share their working hours. The camp teaches networking with US, UK and Canadian lawyers and reaching startups in those markets, which you can do from inside them.

What another year on hold costs

Family moves come first, and putting work on hold was a sensible choice. The cost of staying unclear is only that the gap keeps growing while the decision waits. Three live evenings, for Rs 10, can give you a plan to weigh.

05

What tech law work looks like for an Indian lawyer living abroad

Supporting local lawyers is one route. On Day 2 and Day 3 the camp shows how to find US, UK and Canadian lawyers through bar directories, and how to help them first with blogs and podcasts. The local lawyer stays responsible for local advice, and you support the drafting.

Privacy work travels well. The 6-month plan includes DPDP and GDPR compliance, and Day 3 builds an Upwork profile for data protection work. Indian privacy law matters to foreign companies with Indian users.

Startups need their documents in order wherever they are. On Day 3 the camp reviews a startup's terms and drafts an e-commerce refund policy, and on Day 1 it drafts a software development agreement. Founders sign these documents in every market.

06

Five words every tech contract uses

On Evening 1 you learn the five concepts behind most technology contracts. None of them needs coding.

SLAs
A service level agreement sets the uptime a software provider promises, what counts as downtime, and the credits a customer gets when the promise is missed.

Support metrics
How fast a provider must answer and fix a problem, written as response and resolution times. Lawyers decide what happens when they slip.

APIs
The connection that lets one app talk to another. The contract decides who may use it, for what, and who is liable when it breaks.

Source code and object code
Source code is what programmers write. Object code is what the machine runs. Licences and ownership clauses turn on the difference.

White labelling
Selling another company's product under your own brand. The agreement sets who owns what, the quality promised and who answers to the customer.

07

What happens in the 3 live evenings

Day 1 · Sat 24 Oct · 6 to 9 PM IST
Why tech law now, the 5 concepts every tech lawyer uses (SLAs, APIs, source and object code, white labelling, SaaS), and a software development agreement drafted with you, clause by clause. Then how lawyers reach startups in the US, UK, Canada, Europe and India.

Day 2 · Sun 25 Oct · 6 to 9 PM IST
Six ways tech companies make money and the legal work each one creates, the services e-commerce companies need from lawyers, the 6-month plan, and how to network with US, UK and Canadian lawyers.

Day 3 · Mon 26 Oct · 7 to 10 PM IST
Reviewing a startup's terms and pitching the fix, an e-commerce refund policy, an influencer agreement, and building a freelance profile for privacy work.

The method we teach

1. Skills
Learn a few high-demand tasks first: contracts, website terms and policies. Not the whole field.

2. Track record
Turn each task into a work sample, a short article or a post that shows what you can do.

3. Outreach
Offer useful help to startups and to lawyers abroad, deliver well, and ask for a testimonial.

Join the 3 live evenings for Rs 10

08

What you will have done by Monday night

After Day 1 you will have drafted a software development agreement with the faculty, clause by clause, and seen how lawyers reach startups in the US, UK, Canada and Europe. Both are things you can practise from your current home.

The 6-month plan asks for 2 hours a day, 1 for learning and 1 for outreach. Because you live abroad, you could match your outreach hour to the local working day. The early skills are policies, contracts, DPDP and GDPR. By month 6 you could have a portfolio of drafts, some foreign contacts, and a clearer view on whether to requalify. Each draft can also serve as a work sample for later applications.

09

The plan after the camp, in plain steps

1. About 2 hours a day: one hour learning, one hour on outreach and your track record.
2. Months 1 and 2: start with the easier skills, such as privacy, website policies and contracts, and begin outreach in week 1.
3. Outreach means posting what you learn on LinkedIn, pitching startups one hour a day, and helping lawyers abroad build their brand first.
4. Aim for your first testimonials in month 1, then add skills one by one: SaaS, e-commerce, fintech, IP and takedowns, and more, about 20 over 6 months.

This is the plan taught on Evening 2. How far you get depends on the hours you put in.

10

Lawyers who took this route

Raghav Trehan
A GGSIPU graduate and company secretary. He cleared CIPP/E and joined Mastercard's data privacy team.

Anurag Sushant
Started as a fresher at a data protection consultancy, moved to privacy work at Deloitte, and is now a Senior Associate at KPMG in Dubai.

Individual results. They depend on each learner's own work.

11

Why the demand exists, and what it costs to find out

Market data, not a promise:

1. A record 55,200 startups were recognised in 2025-26, and India had 2.4 lakh recognised startups by 30 Jun 2026. Source: Inc42, 2026.
2. India has 2,117 global capability centres employing about 23.6 lakh people. Source: Nasscom-Zinnov via Business Today, May 2026.
3. Tracxn tracks 1,215 legal tech startups in India. Source: Tracxn, Sep 2026.
4. Harvey, a legal AI company used by 2,400+ organisations by its own count, hires Legal Engineers in Bengaluru who must be qualified Indian advocates. Source: harvey.ai, 2026.

Route	What it costs	What you get
Figuring it out alone	Free, plus months of trial and error	Scattered articles and no feedback on your drafts
A long course before you have tried the work	A large fee, paid upfront	A commitment before you know if the work suits you
This bootcamp	**Rs 10 incl. GST, refundable**	**Three live evenings doing the work with us**

Risk removed. The Rs 10 is refundable. Bring a laptop or phone and a notebook, and keep the three evenings free. Joining details arrive on WhatsApp and email.

Join the 3 live evenings for Rs 10

12

Questions lawyers ask us

Does my visa allow me to do this work?
That depends on your visa and country, and the camp cannot answer it for you. Check your visa conditions before taking paid work. The camp itself is three evenings of learning.

The camp runs on Indian time. Can I attend from here?
Sessions run Sat 24 and Sun 25 Oct, 6 to 9 PM IST, and Mon 26 Oct, 7 to 10 PM IST. Convert those to your local time before you join, because nothing is recorded.

Can I advise on local law where I live?
Usually not in your own name without that country's licence, so check its bar's rules. The work the camp shows is drafting, Indian law, and support for foreign lawyers who stay responsible for their advice.

Is my Indian law degree useful to foreign clients?
Yes, in two ways. Drafting skills transfer across borders, and Indian privacy and tech rules matter to companies with Indian users or plans for India.

Indian lawyers living abroad with family: build a tech law career from wherever you are

If you are an Indian lawyer living abroad with family, tech law lets you draft again without waiting for a foreign licence. In three live evenings you draft a software contract and learn how lawyers reach startups in your new market. Entry is Rs 10 incl. GST, and refundable.

Join the 3 live evenings for Rs 10

Please read. Individual results depend on each learner's own work. LawSikho does not promise any job, client, internship or income. Learner stories describe what individuals did. Market figures come from the sources named beside them and can change. The Rs 10 fee is refundable on request. The bootcamp is live only and is not recorded.

FOR LLB HOLDERS IN BPO & BACK-OFFICE JOBS

Hello... your LLB is calling back. Let's get ready for the legal role you planned for.

Use your degree to learn practical contract drafting, privacy and technology law skills.

This page is for you if you hold an LLB and work in a BPO, a KPO or a back-office team, and your degree has not been used since college.

Tech law is the legal work tech companies need: contracts, privacy, compliance and disputes.

1. Evening 1: draft a software development agreement with us, clause by clause.
2. Evening 2: see six ways tech companies make money, and the legal work each one creates.
3. Evening 3: review a startup's terms and learn how lawyers pitch the fix.

Sat 24 and Sun 25 Oct, 6 to 9 PM IST. Mon 26 Oct, 7 to 10 PM IST. Rs 10 incl. GST, refundable. Live only, no recordings.

Join the 3 live evenings for Rs 10

01

A law degree, and a shift that has nothing to do with it

You finished your LLB, and then a BPO or back-office job came first. It paid on time, and the family needed that. Your day now runs on tickets, quality scores and handling time.

The law degree sits in a file at home. Sometimes a customer reads out a clause from their contract and you understand it better than your team lead. Nobody at work knows you studied law.

You have thought about going back. Each time, the question is the same: back to what, and how, without giving up the job that runs the house?

02

Legal work for tech companies, built on what you already know

Tech law is the legal work that technology companies need: their contracts, compliance, data privacy, policy and disputes. It is desk work done on a laptop, mostly in writing. A startup needs a service agreement drafted or its terms checked, and it needs a person who can read law to do it.

If you move into this field, your LLB stops being a certificate and becomes your trade. You could draft for startups, support US lawyers as a remote paralegal, or later move into a tech company's legal team.

Join the 3 live evenings for Rs 10

03

Routes you may have already looked at

Enrolling and starting in a local court
Court practice starts with years as a junior on little or no pay. It also needs you in court during the day, which means leaving the job that supports your family.

Applying for legal executive jobs with your LLB
Most openings ask for legal experience you could not get while working shifts. Without a single document to show, the applications rarely move.

Climbing inside the BPO
A team lead role brings more responsibility and a little more pay. It also takes you one step further from law each year.

04

You are not behind. You are pointed in the wrong direction.

The problem has never been effort. You work long shifts and hit hard targets. The problem is positioning: you present yourself as a process associate, so the world buys process work from you.

Here is the part most people miss. One of the first concepts on Day 1 is the SLA, the service level agreement, with its uptime, downtime and service credits. Day 1 also covers service-level metrics for support. You have lived inside those metrics for years, and a lawyer who knows how a support desk really runs reads an SLA with far more sense.

What another year in the queue costs

Nothing dramatic happens if you wait. The degree just gets older, the subjects feel further away, and the question of going back gets harder to ask. A small, cheap step now keeps the door open while you decide.

05

What tech law work looks like for an LLB holder from a BPO

Much of tech law is service contracts. A software company that sells support signs an SLA promising response times, uptime and credits when it falls short. You would draft and check those schedules, and you already know what a realistic response time looks like.

Another large share is policy work. Every app that collects customer details needs a privacy policy and terms of use that match what it actually does. You have handled customer data under strict process rules, so you know where real data flows inside a business.

On Day 1 the camp also walks through the kinds of work US tech startups send to paralegals. These are tasks done by email and shared documents, one at a time. That suits someone who already works to written instructions and fixed deadlines.

06

Five words every tech contract uses

On Evening 1 you learn the five concepts behind most technology contracts. None of them needs coding.

SLAs
A service level agreement sets the uptime a software provider promises, what counts as downtime, and the credits a customer gets when the promise is missed.

Support metrics
How fast a provider must answer and fix a problem, written as response and resolution times. Lawyers decide what happens when they slip.

APIs
The connection that lets one app talk to another. The contract decides who may use it, for what, and who is liable when it breaks.

Source code and object code
Source code is what programmers write. Object code is what the machine runs. Licences and ownership clauses turn on the difference.

White labelling
Selling another company's product under your own brand. The agreement sets who owns what, the quality promised and who answers to the customer.

07

What happens in the 3 live evenings

Day 1 · Sat 24 Oct · 6 to 9 PM IST
Why tech law now, the 5 concepts every tech lawyer uses (SLAs, APIs, source and object code, white labelling, SaaS), and a software development agreement drafted with you, clause by clause. Then how lawyers reach startups in the US, UK, Canada, Europe and India.

Day 2 · Sun 25 Oct · 6 to 9 PM IST
Six ways tech companies make money and the legal work each one creates, the services e-commerce companies need from lawyers, the 6-month plan, and how to network with US, UK and Canadian lawyers.

Join the 3 live evenings for Rs 10

08

What you will have done by Monday night

By the end of Day 1 you will have worked through a software development agreement with the faculty, clause by clause. You will know the appointment, milestones, specifications, payment, acceptance testing, IP assignment and handover clauses, and the mnemonic that keeps them in order. You will also know what an SLA, an API, source code, object code and white labelling mean inside a contract.

The camp's 6-month plan asks for 2 hours a day: 1 hour of learning and 1 hour of outreach. Around a shift, that could mean an hour before work and an hour after it. The first 2 months cover the easier skills, such as policies, contracts, DPDP and GDPR, with outreach from the first week. By month 6, someone who keeps to the plan could have a set of drafted documents, a few testimonials and a clearer sense of whether to switch fully.

09

The plan after the camp, in plain steps

1. About 2 hours a day: one hour learning, one hour on outreach and your track record.
2. Months 1 and 2: start with the easier skills, such as privacy, website policies and contracts, and begin outreach in week 1.
3. Outreach means posting what you learn on LinkedIn, pitching startups one hour a day, and helping lawyers abroad build their brand first.

Questions lawyers ask us

I never enrolled with the Bar. Is this still for me?
Yes. What the camp teaches is drafting and review: contracts, terms and policies. Paralegal support for US lawyers, covered on Day 1, does not involve appearing in any court.

I work evening shifts. Can I watch the sessions later?
No. The camp is live only and there are no recordings. Sessions run Sat 24 and Sun 25 Oct, 6 to 9 PM IST, and Mon 26 Oct, 7 to 10 PM IST, so check your roster before you join.

I studied law years ago and forgot most of it. Will I be lost?
The camp does not test your old syllabus. The work depends on the business model, not on exam subjects, and each skill is shown live from the first clause.

Do I need to know coding or technology?
No. The script says the work does not require any special understanding of tech, science or coding. You need to understand how tech businesses work and make money, and Day 2 teaches 6 of those models.

LLB holders in BPO and back-office jobs: your degree can still build a tech law career

If you hold an LLB and work in a BPO or back office, three live evenings can show you what tech law work looks like and how to start it. You draft real clauses with the faculty from Day 1. It costs Rs 10, it is refundable, and it does not ask you to quit anything first.

Join the 3 live evenings for Rs 10

Please read. Individual results depend on each learner's own work. LawSikho does not promise any job, client, internship or income. Learner stories describe what individuals did. FOR WOMEN LAWYERS RETURNING AFTER A FAMILY BREAK

Your career took a break. Time to come back with a more flexible legal route.

> **Refresh your legal skills and explore contracts, privacy and tech law, live from home.**

This page is for you if you are a lawyer coming back after a family break, for children, marriage or a parent, and you want to restart from home.

> Tech law is the legal work tech companies need: contracts, privacy, compliance and disputes.

1. **Evening 1: draft a software development agreement with us, clause by clause.**
2. **Evening 2: see six ways tech companies make money, and the legal work each one creates.**
3. **Evening 3: review a startup's terms and learn how lawyers pitch the fix.**

Sat 24 and Sun 25 Oct, 6 to 9 PM IST. Mon 26 Oct, 7 to 10 PM IST. Rs 10 incl. GST, refundable. Live only, no recordings.

Join the 3 live evenings for Rs 10

01

Ready to come back, and unsure who will take you back

You stepped away for family. It was the right decision, and you would make it again. Now the children are in school or the house runs more smoothly, and you want your work back.

But the questions start before you do. Relatives ask whether anyone will hire you after the gap. Old colleagues have moved up. The law has changed in places, and your confidence has taken a knock.

A firm job would bring back the long hours you left. A return to court would need full days away from home. Neither fits the life you have now.

02

A legal career rebuilt from home

Tech law is the legal side of running a technology company: its contracts, data privacy, compliance and disputes. Most of it is done on a laptop and sent by email. A founder in another city or country cares about one thing: whether the privacy policy arrives right and on time.

Restarting in tech law could let you rebuild a legal career on hours that fit your family, from home, with clients who look at your work before your CV. Later, it could lead to a firm's technology team or a tech company's legal role, if you want that.

Join the 3 live evenings for Rs 10

03

Routes back you may have already tried

Applying to law firms again
Many firms ask about the gap first and the work second. The roles offered can feel like starting over as a fresher, with the old hours.

Going back to court practice
Court days run on fixed hours away from home. Hearings move without warning, which is hard to manage with family duties.

Refresher courses on new laws
They update your knowledge, which helps. But they end with a certificate, not a client or a document that proves you are back.

04

The gap is on your CV, not on your draft

Coming back is not about proving you worked hard enough during the break. It is about where you position yourself. In a court or a firm, the gap is the first thing people see. In tech law, the first thing a client sees is your draft.

The rules in this field are also new. The camp's script says a veteran and a fresh graduate stand on the same starting line in tech law. Years away from court cost you less in a field where nobody has a long head start.

What waiting for the perfect moment costs

There is rarely a perfect moment to restart. Each extra month can make the first step feel heavier, though nothing is lost for good. Three evenings at home, for Rs 10, is a gentle way to begin again.

05

What tech law work looks like for a lawyer restarting after a family break

Policies are a calm way back. Online stores need cancellation, return and refund policies, and apps need terms that match how they work. Each is a contained task you can finish in a few focused sittings.

Contract review builds on what you already trained in. Reading a startup's terms for missing protection, such as a liability cap or clear IP ownership, uses the same eye you used on agreements before your break.

Remote paralegal work is another door. On Day 1, the camp lists the kinds of work US tech startups send to paralegals. It is task-based and done from home, so it can fit around school runs and family meals.

06

Five words every tech contract uses

On Evening 1 you learn the five concepts behind most technology contracts. None of them needs coding.

SLAs
A service level agreement sets the uptime a software provider promises, what counts as downtime, and the credits a customer gets when the promise is missed.

Support metrics
How fast a provider must answer and fix a problem, written as response and resolution times. Lawyers decide what happens when they slip.

APIs
The connection that lets one app talk to another. The contract decides who may use it, for what, and who is liable when it breaks.

Source code and object code
Source code is what programmers write. Object code is what the machine runs. Licences and ownership clauses turn on the difference.

White labelling
Selling another company's product under your own brand. The agreement sets who owns what, the quality promised and who answers to the customer.

07

What happens in the 3 live evenings

Day 1 · Sat 24 Oct · 6 to 9 PM IST
Why tech law now, the 5 concepts every tech lawyer uses (SLAs, APIs, source and object code, white labelling, SaaS), and a software development agreement drafted with you, clause by clause. Then how lawyers reach startups in the US, UK, Canada, Europe and India.

Day 2 · Sun 25 Oct · 6 to 9 PM IST
Six ways tech companies make money and the legal work each one creates, the services e-commerce companies need from lawyers, the 6-month plan, and how to network with US, UK and Canadian lawyers.

Reviewing a startup's terms and pitching the fix, an e-commerce refund policy, an influencer agreement, and building a freelance profile for privacy work.

The method we teach

1. Skills
Learn a few high-demand tasks first: contracts, website terms and policies. Not the whole field.

2. Track record
Turn each task into a work sample, a short article or a post that shows what you can do.

3. Outreach
Offer useful help to startups and to lawyers abroad, deliver well, and ask for a testimonial.

Join the 3 live evenings for Rs 10

08

What you will have done by Monday night

On Day 3 you draft an e-commerce refund policy with the faculty, in four parts: when to cancel, when to return, how returns work, and how and when the refund is paid. It is a complete document, and a real first step back into legal work.

The 6-month plan asks for 2 hours a day, which many returning lawyers fit into school hours or late evenings. The first 2 months focus on the easier skills, such as policies, contracts, DPDP and GDPR. The plan aims for a few testimonials early on. By month 6 you could have a body of recent work that answers the gap question for you.

09

The plan after the camp, in plain steps

1. About 2 hours a day: one hour learning, one hour on outreach and your track record.
2. Months 1 and 2: start with the easier skills, such as privacy, website policies and contracts, and begin outreach in week 1.
3. Outreach means posting what you learn on LinkedIn, pitching startups one hour a day, and helping lawyers abroad build their brand first.
4. Aim for your first testimonials in month 1, then add skills one by one: SaaS, e-commerce, fintech, IP and takedowns, and more, about 20 over 6 months.

This is the plan taught on Evening 2. How far you get depends on the hours you put in.

12

Questions lawyers ask us

My drafting is rusty after the break. Will I keep up?
Each document is built live, clause by clause, from the start. The camp assumes you are new to tech law, so nobody is ahead of you on the material.

The sessions are in the evening. What if family needs me?
The camp is live only, with no recordings, so plan the three evenings ahead: Sat 24 and Sun 25 Oct, 6 to 9 PM IST, and Mon 26 Oct, 7 to 10 PM IST. The Rs 10 is refundable.

Will I need to go to an office later?
Not for the work taught on the camp. It is drafting and review, done on a laptop and sent online.

Do I need to understand technology?
No. The work follows how a tech business makes money, not how its code works. Day 1 explains the five tech terms you need in plain words.

Lawyers coming back after a family break: restart your legal career in tech law

If you are a lawyer coming back after a family break, tech law lets clients judge your draft, not your gap. In three live evenings from home, you draft real documents with the faculty. Rs 10 incl. GST covers all three evenings, and it is refundable.

FOR LAWYERS WHO LEFT A LAW FIRM FOR FAMILY

You left the firm.
You didn't leave your legal potential.
Let's get back.

Use your degree to explore practical tech law work, from drafting software contracts to reviewing privacy policies.

This page is for you if you are a lawyer who left a law firm job to look after family, and you still have the drafting habits the firm gave you.

Tech law is the legal work tech companies need: contracts, privacy, compliance and disputes.

1. **Evening 1: draft a software development agreement with us, clause by clause.**
2. **Evening 2: see six ways tech companies make money, and the legal work each one creates.**
3. **Evening 3: review a startup's terms and learn how lawyers pitch the fix.**

Sat 24 and Sun 25 Oct, 6 to 9 PM IST. Mon 26 Oct, 7 to 10 PM IST. Rs 10 incl. GST, refundable. Live only, no recordings.

Join the 3 live evenings for Rs 10

Let's get back.

01

You left the firm. The drafting habits stayed.

You were the associate who knew how a clause should read. Then family needed you, and firm hours do not bend. You left, and it was the right call.

You still notice bad drafting in every agreement you see. But going back means the same billing pressure and late nights. Starting something else feels like throwing away the training you worked hard for.

Meanwhile, former colleagues ask when you are coming back. You do not yet have an answer that fits both your family and your training.

02

Your firm drafting, pointed at tech companies

Tech law is the legal work a technology company needs on its contracts, privacy, compliance and disputes. Tech contracts are a large part of it: software development agreements, MSAs, SOWs, change orders, SLAs and EULAs. They are commercial contracts with a technical subject. Day 2 shows how tech companies make money, which tells you which contracts each one needs.

Returning through tech law could let you use your firm training on your own terms. You could draft directly for startups from home, or later move into a firm's technology team or a tech company's legal team when family allows.

03

Ways back you may have already considered

Rejoining a law firm
The work is familiar, but so are the hours that made you leave. Little about firm life has changed while you were away.

Applying for in-house roles
Many in-house openings prefer continuous recent experience. A family break is hard to explain against that.

Taking contract document review work
It keeps you near legal work, but the tasks are narrow and repetitive. It rarely builds towards a career you choose.

04

You are not starting over. You are changing who you draft for.

This is not about catching up on effort. You already did years of hard drafting. The issue is that you have only been positioned as a firm associate, and that role came with firm hours.

Tech companies need exactly what you did at the firm: careful contracts, clean definitions and protections that hold. What you add is a short tech vocabulary and an understanding of how tech businesses make money. The camp covers both.

What staying undecided costs

Taking time for family was right, and your skills have not vanished. The cost of staying undecided is only that each year makes the return feel bigger. Three evenings and Rs 10 can show you a way back that fits.

05

What tech law work looks like for a lawyer who left a firm job for family

Software development agreements are close to the commercial contracts you drafted. The camp's mnemonic covers appointment, milestones, specifications, payment, acceptance testing, IP assignment and handover. You will recognise the bones, and only the tech details are new.

SaaS deals add the vocabulary. SLAs with uptime, downtime and credits, source code versus object code, and white labelling all turn up in the clauses. Day 1 explains each, and a firm-trained eye knows where they belong in a contract.

Review work suits your instincts. On Day 3 the camp reviews a startup's terms for gaps such as uncapped liability or unclear IP ownership. You have done this kind of markup on bigger deals, so it should feel like familiar ground. Day 3 then shows how a lawyer offers the fix to the founder.

06

Five words every tech contract uses

On Evening 1 you learn the five concepts behind most technology contracts. None of them needs coding.

SLAs
A service level agreement sets the uptime a software provider promises, what counts as downtime, and the credits a customer gets when the promise is missed.

Support metrics
How fast a provider must answer and fix a problem, written as response and resolution times. Lawyers decide what happens when they slip.

APIs
The connection that lets one app talk to another. The contract decides who may use it, for what, and who is liable when it breaks.

Source code and object code
Source code is what programmers write. Object code is what the machine runs. Licences and ownership clauses turn on the difference.

White labelling
Selling another company's product under your own brand. The agreement sets who owns what, the quality promised and who answers to the customer.

07

What happens in the 3 live evenings

Day 1 · Sat 24 Oct · 6 to 9 PM IST
Why tech law now, the 5 concepts every tech lawyer uses (SLAs, APIs, source and object code, white labelling, SaaS), and a software development agreement drafted with you, clause by clause. Then how lawyers reach startups in the US, UK, Canada, Europe and India.

Day 2 · Sun 25 Oct · 6 to 9 PM IST
Six ways tech companies make money and the legal work each one creates, the services e-commerce companies need from lawyers, the 6-month plan, and how to network with US, UK and Canadian lawyers.

Day 3 · Mon 26 Oct · 7 to 10 PM IST
Reviewing a startup's terms and pitching the fix, an e-commerce refund policy, an influencer agreement, and building a freelance profile for privacy work.

The method we teach

1. Skills
Learn a few high-demand tasks first: contracts, website terms and policies. Not the whole field.

2. Track record
Turn each task into a work sample, a short article or a post that shows what you can do.

3. Outreach
Offer useful help to startups and to lawyers abroad, deliver well, and ask for a testimonial.

08

What you will have done by Monday night

By the end of Day 1 you will have drafted a software development agreement with the faculty, clause by clause. For a firm-trained lawyer, it is a quick way to see how much of your old skill carries straight into tech contracts.

The 6-month plan asks for 2 hours a day, 1 learning and 1 on outreach and track record. That pace is gentle next to firm hours. The plan builds 20 skills over 6 months, from website policies and software agreements to DPDP compliance and data breach response. By month 6 you could have a recent portfolio that speaks for the years you stepped away.

09

The plan after the camp, in plain steps

1. About 2 hours a day: one hour learning, one hour on outreach and your track record.
2. Months 1 and 2: start with the easier skills, such as privacy, website policies and contracts, and begin outreach in week 1.
3. Outreach means posting what you learn on LinkedIn, pitching startups one hour a day, and helping lawyers abroad build their brand first.
4. Aim for your first testimonials in month 1, then add skills one by one: SaaS, e-commerce, fintech, IP and takedowns, and more, about 20 over 6 months.

This is the plan taught on Evening 2. How far you get depends on the hours you put in.

10

Lawyers who took this route

Mayank Barman
Studied at Calcutta University and began learning tech law in his second year. He worked in the TMT team at Cyril Amarchand Mangaldas and is now an associate on Khaitan & Co's data privacy team.

Tuba Sanobar
A 2021 law graduate from Nagpur who was litigating. She now works at Infosys as a privacy and data protection analyst.

Individual results. They depend on each learner's own work.

11

Why the demand exists, and what it costs to find out

Market data, not a promise:

1. A record 55,200 startups were recognised in 2025-26, and India had 2.4 lakh recognised startups by 30 Jun 2026. Source: Inc42, 2026.
2. India has 2,117 global capability centres employing about 23.6 lakh people. Source: Nasscom-Zinnov via Business Today, May 2026.
3. Tracxn tracks 1,215 legal tech startups in India. Source: Tracxn, Sep 2026.
4. Harvey, a legal AI company used by 2,400+ organisations by its own count, hires Legal Engineers in Bengaluru who must be qualified Indian advocates. Source: harvey.ai, 2026.

Route	What it costs	What you get
Figuring it out alone	Free, plus months of trial and error	Scattered articles and no feedback on your drafts
A long course before you have tried the work	A large fee, paid upfront	A commitment before you know if the work suits you
This bootcamp	**Rs 10 incl. GST, refundable**	**Three live evenings doing the work with us**

Risk removed. The Rs 10 is refundable. Bring a laptop or phone and a notebook, and keep the three evenings free. Joining details arrive on WhatsApp and email.

Questions lawyers ask us

Is this just firm work again, without the firm?
The drafting craft is the same, which is the point. The difference is that it can be done from home, one task at a time, at a pace you set.

My last deal was years ago. Am I out of date?
Tech rules are new for everyone, so a lawyer returning after a break is not far behind. The camp teaches the tech vocabulary from scratch on Day 1.

Do I need a CIPP or another certificate first?
No. In the 6-month plan, the CIPP exam is optional and comes after month 6. The camp starts with drafting.

What do I get for Rs 10?
Three live evenings, 24 to 26 Oct, where documents are drafted with you: a software development agreement, a startup's terms review, a refund policy and an influencer agreement. The fee is refundable, and the sessions are live only.

Lawyers who left a firm job for family: return to law through tech law, on your own terms

If you left a firm job to look after family, your firm drafting is exactly what tech companies need on their contracts. In three live evenings you draft a software development agreement with the faculty and learn the tech vocabulary around it. You pay Rs 10 incl. GST, and it is refundable.
